Eco Vision assigned patent for Eco Jar

Eco Vision has gained a patent for its home compostable Eco Jar package, issued as patent #7,954,640 by the US Patent and Trademark Office. Like the company's Eco Tube, the Eco Jar is designed as an eco-friendly packaging solution. "The Eco Jar, literally a jar within a jar, provides superior protection," commented Ellery West, president of Eco Vision. "It maintains package integrity even in cases of rough handling, particularly for products subject to leakage. By integrating compostable barrier films and coatings, the Eco Jar meets the packaging requirements for foods, cosmetics, personal care and many industrial products."

According to the company, the

product's downside was high production costs, but to overcome this, the inventors have developed a new technology said to vastly simplify production.
